

VAIBHAV AGARWAL

Senior Software Engineer | Java | Distributed Systems | Microservices | AWS

+91-7406389664 | avaihav51@gmail.com | linkedin.com/in/avaibhav51 | Bangalore, India

SUMMARY

Senior Software Engineer with 7.5 years of experience designing, building and operating distributed, event-driven backend platforms using Java, Spring Boot, Kafka, Kubernetes and AWS. Proven track record of owning services end-to-end, improving scalability and operational efficiency, driving architecture discussions, and mentoring engineers while delivering high-throughput SaaS solutions.

TECHNICAL SKILLS

Core Expertise: Distributed Systems, Microservices, Event-Driven Architecture, Cloud Native Systems, System Design, API Design, Scalability, Performance Engineering, Concurrency, Observability

Languages & Frameworks: Java (8, 11, 17, 21), Spring Boot, Hibernate, JUnit, Swagger, Maven

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD Pipelines, Git

Data & Messaging: Kafka, MySQL, Spark, Redis, Data Pipelines, Query Optimization

Observability: Prometheus, Grafana, Amazon Timestream

Development Practices: Data Structures & Algorithms, Agile/Scrum, TDD, Code Reviews, Mentorship

AI-Assisted Development: Claude (Amazon Kiro), ChatGPT, Efficient prompting, Reduced token usage

PROFESSIONAL EXPERIENCE

Securonix | Bangalore

May 2022 - Present

Senior Software Engineer

Multi-tenant cloud SIEM platform providing B2B cybersecurity solutions.

- Designed and delivered revenue-generating distributed backend platform capabilities using Kafka, multithreading, and Spring Boot microservices, owning service design, implementation, deployment, and post-production observability (Java 21)
- Improved scalable data ingestion workflows leveraging AWS S3, SNS, RDS and Spark for high-volume security event processing across a multi-tenant SaaS platform
- Implemented platform observability using Prometheus, Grafana and Timestream for enabling proactive system health monitoring and faster production diagnosis, deployed through EKS
- Partnered with DevOps to architect a near-zero-downtime deployment strategy for monolithic platform upgrades, enabling smoother rollouts with minimal production disruption
- Re-architected a critical Spring Boot microservice to optimize memory and compute utilization, reducing infrastructure consumption by ~80% and lowering operational cost by ~72%
- Led a team of 8 engineers for 4 months, coordinating technical execution, code reviews, delivery planning and release management while ensuring stable production deployments

- Contributed to Architecture Review Board (ARB) by driving design discussions and architecture reviews facilitating cross-team technical decisions
- Owned production releases, operational improvements and post-release monitoring
- Conducted technical interviews and mentored engineers

Software Engineer

- Optimized APIs & event-processing pipelines handling high EPS data using Kafka & Microservices - filtering, enriching, and analyzing security events, and achieving 20–30% throughput improvement through caching, query tuning, database and code optimizations
- Drove migration from a monolith module to spring boot microservices; performed Java platform modernization from Java 8 to 17, improving modularity and achieving deployment independence
- Developed internal debugging utilities that reduced production investigation time by 40%, improving operational efficiency and accelerating incident resolution
- Leveraged Claude with efficient prompting and reduced token usage to identify gaps and strengthen overall product quality
- Collaborated with product, support, and TAM teams for POCs, customer demos, and resolution of business-critical issues
- Authored architecture proposals, design documents and release documentation to improve cross-team collaboration and engineering decision transparency

Senior Engineer | Nagarro | Remote

Nov 2021 – May 2022

- Contributed to enhancements and maintenance of core services, focusing stability
- Participated in design discussions, defect triaging, and testing during release cycles

Software Development Engineer | Verifone | Bangalore

Jan 2020 – Nov 2021

POS solutions for Petroleum and Convenience stores supporting multiple payment modes.

- Served as subject matter expert for two payment card specifications adopted across multiple customer deployments, influencing payment workflow implementations
- Developed and enhanced payment/refund processing and batch settlement workflows using Java and Spring MVC for PCI-compliant POS systems supporting multiple payment networks
- Analyzed business requirements and assessed functional and technical impact
- Conducted code reviews, KT sessions, and created utilities for faster debugging

Associate IT Developer | Medtronic | Bangalore

Feb 2019 – Jan 2020

- Worked on an ECM system for document workflow management in a healthcare environment
- Automated archival + cleanup process by scripting, reducing manual operational overhead

EDUCATION

PG Diploma in Advanced Computing | CDAC ACTS | Pune

2018 – 2019

B.E. in Computer Science | REVA ITM | Bangalore

2014 – 2018
